

Compare the neighborhoods of New York and Toronto

1. Introduction

Before my vacation, I plan to have a trip in New York City or the city of Toronto. Both of them are very diverse and are the financial capitals of their respective countries. It's too difficult to decide which one is better for my trip. One interesting idea would be to compare the neighborhoods of the two cities and determine which city is better for my trip?

2. Data

a) New York (Manhattan)

For New York City, I need a dataset that contains the boroughs and the neighborhoods that exist in each borough as well as the latitude and longitude coordinates of each neighborhood. Here is the link to the dataset: https://geo.nyu.edu/catalog/nyu_2451_34572
Transform the data into a pandas dataframe.

	Borough	Neighborhood	Latitude	Longitude
0	Bronx	Wakefield	40.894705	-73.847201
1	Bronx	Co-op City	40.874294	-73.829939
2	Bronx	Eastchester	40.887556	-73.827806
3	Bronx	Fieldston	40.895437	-73.905643
4	Bronx	Riverdale	40.890834	-73.912585

Let's simplify the above dataset and segment and cluster only the neighborhoods in Manhattan. Let's slice the original dataframe and create a new dataframe of the Manhattan data.

	Borough	Neighborhood	Latitude	Longitude
0	Manhattan	Marble Hill	40.876551	-73.910660
1	Manhattan	Chinatown	40.715618	-73.994279
2	Manhattan	Washington Heights	40.851903	-73.936900
3	Manhattan	Inwood	40.867684	-73.921210
4	Manhattan	Hamilton Heights	40.823604	-73.949688

b) Toronto

For Toronto, I could get the dataset that contains the boroughs and the neighborhoods from https://en.wikipedia.org/wiki/List_of_postal_codes_of_Canada:_M . I could get the location (latitude & longitude) by http://cocl.us/Geospatial_data .

5. Result

From cluster result, we could see that New York is quite different from Toronto. In New York, each cluster has obvious features, such cluster1 has more shopping and art, cluster2 has more Bar and Spa. But in Toronto, different venues are evenly distributed in neighborhoods.

I plan go to New York for the vacation, epically in Neighborhoods of cluster 1 and 2.

6. Conclusion

K-means clustering algorithm could be used for segmenting and clustering the neighborhoods of cities.
